

Garima Kalra

Staff UX/UI Designer

San Francisco Bay Area · hello@garimakalra.com · linkedin.com/in/kalragarima · garimakalra.com

Staff UX/UI designer with **10+ years designing enterprise SaaS** – infrastructure monitoring, cloud monetization, and fleet compliance. I turn complex, high-stakes workflows into interfaces people can reason about, grounding decisions in user research and systems thinking. A foundation in **QA engineering** means I think in system behavior and edge cases and partner closely with engineers on feasible solutions.

EXPERIENCE

Fortinet — Staff UX/UI Designer

2025 – Aug 2026

FortiMonitor – cloud infrastructure & network monitoring. Sole designer, end-to-end.

- Owned end-to-end product design for FortiMonitor as the sole designer, from customer discovery and product strategy through launch and continuous iteration.
- Designed an **AI Incident Investigator** concept that performs the first pass of incident triage – correlating signals and separating observed fact from inferred cause – while keeping engineers in control of every consequential decision; validated the concept through Wizard-of-Oz and high-fidelity prototype testing.
- Designed **NetFlow dashboards and topology experiences** that turn complex network data into intuitive visualizations, helping admins understand performance and relationships across globally distributed infrastructure.
- Designed a **bulk onboarding experience** that replaced API-driven workflows with an intuitive UI, letting Customer Success onboard large enterprise customers more efficiently.
- Influenced roadmap decisions beyond design deliverables by bringing customer context into product, engineering, and support conversations.

Fortinet — Senior UX/UI Designer

2021 – 2025

- Re-architected FortiMonitor's **information architecture** after the Panopta acquisition – replacing a 13-item "settings junk drawer" and overlapping menus with **six task-based destinations**, improving findability and creating a structure that scales as the platform grows.
- Ran the IA as a **research-led effort in parallel with the roadmap**: open and closed card sorting (~20 participants), tree testing (**72.7% task success, 66.9% directness**), and in-product usability testing recruited through an embedded widget.
- Shipped the redesigned navigation to enterprise customers on the Neutrino design system, partnering with six front-end engineers and designing an in-app guided walkthrough (Pendo) to onboard existing users into the new structure.
- Introduced **Design QA** into the development process after identifying recurring implementation gaps, creating a shared quality standard between design and engineering before release.

CSG International — UX/UI Designer II

2017 – 2021

Ascendon – cloud monetization & billing platform.

- Collaborated with a team of seven designers to modernize and migrate a legacy platform into a scalable SaaS solution, redesigning complex workflows that had become slow, deeply nested, and dependent on manual workarounds.
- Designed the **Customer Care** and **Catalog Management** modules to 100% feature parity while creating a more intuitive self-service experience that reduced reliance on documentation and support.
- Established a UX cleanup initiative with engineering – a recurring process to identify, prioritize, and resolve UX/UI debt through quick wins – and contributed to the design system and interaction patterns.

- Mentored junior designers and created an onboarding program to help new designers ramp up effectively.

Rand McNally — UX/UI Designer

2016 – 2017

DriverConnect – fleet management & ELD compliance.

- Designed user-centered solutions for a fleet management and ELD compliance platform in close collaboration with stakeholders, using an iterative process.
- Redesigned the **onboarding experience for fleet managers**, reducing friction for first-time users and decreasing support requests.
- Designed and shipped an in-app collaboration mechanism that improved driver–fleet-manager communication and reduced paperwork.

Synerzip — UX Designer / Senior QA

2011 – 2015

- Progressed from QA engineer to the team's first UX practitioner, introducing a user-centered design process.
- Reduced manual testing effort by automating regression test suites.

SKILLS

DESIGN

Product Design · Interaction Design · Information Architecture · Systems Thinking · Visual Design

METHODS

User Research · Usability Testing · Heuristic Evaluation · Journey Mapping · User Flows · Design QA

TOOLS

Figma · Figma AI · Sketch · Adobe CC · Jira · Confluence · Pendo · ChatGPT · Claude

DOMAINS

Enterprise / B2B SaaS · Infrastructure monitoring · Billing & monetization · Fleet & compliance · AI / human workflows

CERTIFICATIONS

UI/UX Design for AI Products – Stanford Online

Nielsen Norman Group (NN/g)

Facilitating UX Workshops · Information Architecture · Journey Mapping · One-Person UX Team

Certified Usability Analyst – Human Factors International

Human-Computer Interaction – Coursera, University of San Diego

EDUCATION

UX/UI & Front-End Development Bootcamp

Designation, Chicago · 2015 – 2016

Master's in Computer Applications

Amity University, India · 2006 – 2009
